EDUCATION

• Vellore Institute of Technology

Vellore, India

Bachelor of Engineering, Computer and Electrical Engineering

TECHNICAL EXPERIENCE

• Staple AI — Forward Deployed Engineer (FDE-2)

Singapore, Hybrid

Current role: September 2026 – Present

At Staple: May 2024 – Present

- **Enterprise ownership:** Own delivery for **20+ enterprise customers**, connecting requirements, product engineering, customer success and QA; translate onsite findings and production feedback into tested software changes.
- **Incident recovery:** Led recovery of stalled email ingestion through root-cause analysis, transactional repairs and monitored reprocessing; built attachment-recovery tools with dry-run defaults and explicit verification checks.
- **Customer reliability:** Investigated silent extraction failures using document comparisons and logs; validated template cleanup on affected and control documents, then specified completeness checks and bounded retries.

Earlier: AI Software Engineer (SDE-2; previously SDE-1)

SDE-2 from May 2025

- **AI feature delivery:** As a core engineer, shipped complex-table extraction across **3 services and 3 regions**; built Python APIs, model/template schemas and per-page mapping of extracted cells to OCR boxes.
- **Distributed systems:** Co-designed and implemented async document processing with RabbitMQ, retries, deduplication and dead-letter handling; tested scan-message compatibility against **12 reference fixtures** in staging.
- **Model evaluation:** Built an internal LLM/VLM dashboard spanning **8 providers and 25 models**, with ground-truth editing, field comparisons, repeat-run consistency, token-cost visibility and release recommendations.
- **QA automation:** Built regression tests for **70 API endpoints** with response contracts, negative cases and isolated-data cleanup; moved region-aware scheduling to GitHub Actions using Postman CLI.
- **Migrations and data:** Led model migrations with baseline snapshots, accuracy/export checks and rollback procedures; routed read traffic to replicas with separate read/write sessions across **6+ backend services**.

• AIOverflow — Founder & Applied AI Engineer

Remote, India

Independent products and collaborative client delivery

- **Product engineering:** Build AI applications across healthcare, business operations and maritime workflows; own requirements, implementation, testing and deployment with domain and engineering collaborators.
- **AI safeguards:** Built text-to-SQL over **17 allowlisted tables** with query validation and read-only database transactions; built source-grounded publishing with citation checks, duplicate blocking and automated editorial review.
- **Engineering quality:** Built asynchronous résumé generation with automated review, resumable progress and version-bound approval; strengthened clinical transcription with reconnect handling and concurrent-session fixes.

• Dotniron Technologies — AI Software Engineer

USA, Remote

Alvarez & Marsal engagement: Diligence GPT

Dec 2023 – May 2024

- Led Python backends for Diligence GPT with **Django, FastAPI and ArangoDB**; designed retrieval-augmented generation (RAG) with LangChain/OpenAI for due diligence. Client engagement continued through June 2024.

• Bajaj Finserv Health — Data Science Engineer Intern

Pune, India

InSightRx Data Team

May – Aug 2023

- Built lab-test recommendations with a **30% efficiency gain**; applied LLMs, OCR, NER and YOLO to healthcare data and optimized Elasticsearch/SQL queries and fuzzy matching for **80% faster retrieval** in project measurements.

• TIFAC / VIT — Backend Development & Data Intern

Vellore, India

Backend Lead, Physio Plus

Dec 2022 – Jun 2023

- Led the FastAPI, MongoDB and AWS backend for patient records and **100+ daily appointments**; designed clinic workflows and analyzed patient data, alongside research on algorithms for autonomous inventory drones.

EARLIER EXPERIENCE AND MENTORING

- **Smart Diet Planner — Machine Learning Researcher** Remote
Research and development internship Aug 2022 – Apr 2023
 - Built nutrition extraction, search, automated PDF analysis and a PaLM-based diet chatbot for an application serving **850k+ users**; implemented macro calculations and recommendations incorporating medical-condition inputs.
- **Grroom — Machine Learning Intern / Team Lead** India
Promoted to Team Lead in January 2022 Nov 2021 – Feb 2022
 - Trained YOLO for **100k+ iterations** for fashion-image detection and tagging, integrated models with the backend and led **10+ interns** developing ML algorithms and Python annotation scripts.
- **Python and ML Teaching / Mentoring** Remote
Tekie, Cybeorg, CipherSchools and other education platforms 2021 – 2023
 - Mentored **60+ students** through **500+ hours** at Tekie and delivered **300+ hours** at Cybeorg; evaluated code, debugged assignments and built curricula. Also taught at edvi, Modo Edulabs, RoboGems and Camp K12.

SELECTED PRODUCTS AND PROJECTS

- **Operations ERP (AIOverflow):** Built booking, inventory, permissions, payroll and finance with Next.js, TypeScript, PostgreSQL and Prisma. Shipped the public site and ERP; reduced measured blog HTML payload from **487 kB** to **127 kB** through server-side pagination and selective queries; added read-only AI reporting over the operational data.
- **Clinical Scribe / ScribeDesk (AIOverflow):** Built the original FastAPI/MongoDB clinical MVP for streaming transcription, editable notes, encounter chat and PDF export with Deepgram/OpenAI. In the later collaborative ScribeDesk codebase, contributed authentication fixes, migrations and deployment integration.
- **Applywise / AuditVault (AIOverflow):** Built profile ingestion, job matching, a browser extension and résumé generation with automated review for Applywise. Built AuditVault with Go, Next.js and PostgreSQL: an **eight-stage audit lifecycle**, vessel-level access control, mutation logs, resumable R2/S3 uploads and signed downloads.
- **MarinePulse / SellOS (AIOverflow):** Implemented maritime scoring across **121 items in 11 categories**, explainable expert-rule guidance and Word reports. Contributed authentication, billing UI and deployment to the collaborative Next.js/Go/PostgreSQL SellOS retail platform.
- **Earlier AI and algorithmic work:** Built eduAid instructor analytics and note digitization, KaRmA natural-language SQL reports, supplier analytics over **7m+ records**, SVM/fuzzy search and **five-class CCTV disruption detection**. Built graph-based FFCS course planning; additional projects include hAIr and PhotoBook. [Full project archive](#).

HACKATHON ACHIEVEMENTS

- **Wins and podiums:** **1st Prize** – Honeywell / IEEE Women in Engineering VIT WeHack 3.0 (2022) and Bitget U-30 Hackathon (2023); **1st Runner-up** – HackRx 3.0, Bajaj Finserv Health (2022) and Axis Bankathon LLM 1.0 (2023).
- **Major placements:** GLC-HP, **Top 4/3,000+ teams** (2024); Canara Bank DACOE-Thon, **Top 5/3,000+** (2024); SirionLabs HackFest, **Top 7/2,000+** (2022); Samsung Solve for Tomorrow, IIT Delhi, **Phase 2, Top 50/18,000+**.
- Siemens Healthineers SHIFT, **Top 10/3,000+** (2022); Honeywell / JSSATEB Hackwell 3.0, **Top 10/150+**; Walmart Sparkathon, **Top 7** (2023); Amadeus H4S (Top 5); Make-a-thon and AI Arena (Top 10); SmartIdeathon (Top 100).

TECHNICAL SKILLS

Languages: Python, SQL, TypeScript/JavaScript, Go, C++; data structures, algorithms and system design.

ML and evaluation: TensorFlow, Keras, NumPy, SciPy, pandas; LLM/VLM evaluation, RAG, LangChain and structured-output validation; computer vision, YOLO, OCR, NER, regression and SVMs.

Engineering and quality: FastAPI, Django, Flask, React/Next.js, PostgreSQL, MongoDB, ArangoDB, Elasticsearch; Git, AWS, Kubernetes, OpenTelemetry, RabbitMQ, Temporal, CI/CD, debugging and API regression testing.

Relevant credentials: [TensorFlow Hub NLP](#); [Computer Vision Basics](#); [AWS Machine Learning](#); [full credential record](#).

Spoken languages: English (fluent), Telugu and Hindi.
